

CROSS BAR LINERS

FEATURES AND BENEFITS

- Prevents damage caused by wood-faced or steel crossbars
- No delamination failures
- Available in a wide range of sizes and shapes
- Can be used for end walls and center separator bar in trough cars

CHALLENGE

Coil steel products require unique handling and securement in coil cars. Steel cross bars in these cars present a problem that can cause edge damage to coils.

SOLUTION

Our cross bar liners provide an economical and safe way to haul and protect coil steel products in rail cars. With a polyurethane facing, our liners eliminate edge damage to coils. Each cross bar liner has a steel backing plate to allow easy application to existing cross bars and can be used for end walls or center separator bars in tough cars.

Our cross bar liners are also a great solution for other areas that require cushioning or protection such as plate steel car bolsters, axle supports, coal rotary dump supports and more. Available in standard 66" lengths, we can customize to any size or shape to fit your needs.

SPECIFICATIONS AND PART NUMBERS

71434 – 63" Length – 24 lbs.
Length 63" Width 5/8" thick Height 5.5"

0024976 – 66" Length – 25 lbs.
Length 66" Width 5/8" thick Height 5.5"
