

# Cross BAR LINERS

## The FEATURES and BENEFITS

- Prevents damage caused by wood-faced or steel crossbars
- No bond failures
- Available in a wide range of sizes and shapes
- Can be used for end walls and center separator bar in trough cars

## The Challenge

Coil steel products require unique handling and securement in coil cars. Steel cross bars in these cars present a problem that can cause edge damage to coils.

## The Solution

Our cross bar liners provide an economical and safe way to haul and protect coil steel products in rail cars. With a polyurethane facing, our liners eliminate edge damage to coils. Each cross bar liner is bonded to a steel backing plate to allow easy application to existing cross bars and can be used for end walls or center separator bars in trough cars. Our cross bar liners are also a great solution for other areas that require cushioning or protection such as plate steel car bolsters, axle supports, coal rotary dump supports and more. Available in standard 66" lengths, we can customize to any size or shape to fit your needs

## Specifications and Part Numbers

**71434** - 63" Length - 24 lbs.

Length 63" Width 0.2" Height 5.5"
