

LOCOMOTIVE MOBILE SERVICING

LOCOMOTIVE SERVICE TRUCK (LST)

Keep your locomotives maintained and serviced with the Holland Locomotive Service Truck (LST).

Our mobile service allows locomotives to stay on the mainline reducing downtime and providing a significant cost savings. The LST brings cleaning and servicing directly to the locomotive. Holland offers equipment that is scalable to the needs of our customer. Units range from equipment built on 1-ton pickup chassis to units built on 40 or 53 ft tractor trailer systems capable of servicing multiple locomotives on a single trip. All of our LST units can be equipped with systems for water, motor oil, sand and toilet waste, based on customer requirements. In addition, the LST can be customized to jump start locomotives (truck is used as source of compressed air). Hot water pressured wash systems can also be installed to tackle the tough removal of graffiti, oil residue and debris.

Maintain Critical Fluids & Traction Sand

The LST operator can replenish sand, engine water and various oils (engine and governor).

Waste Removal

EPA safe collection and removal of residual waste oils collected from retention tanks for engine and governor oil

Perform Informal Inspections

The LST operator can assess various systems in the locomotive. These visual checks provide an informal “extra set of eyes” to identify potential issues and help the railroad as it performs its formal inspections. The operator can also clean oils and other hazards from walkways and repair chains.

Brake Shoe Service

Includes the inspection, removal and replacement of locomotive brake shoes

Locomotive Lights

Including but not limited to headlights, ditch lights, ground lights, and platform lights

Clean Cabs

The operator can clean windows and mirrors, change cab lights, empty and replace trash bags, sweep the cab, and replenish crew packs.

Service Locomotive Toilets

The LST operator can discharge and recharge toilets, refill water and sanitizer, and clean the compartment.
