

# Load **SNUGGER**<sup>®</sup> System

## The **FEATURES** and **BENEFITS**

- AAR-approved
- Secures palletized shipment from excessive load shifting
- Easy-to-use design
- Increases payload capacity by 10,000 lbs. or more
- Easy to repair or replace components
- Prevents damage to rolled paper in shipment
- Low cost and lightweight
- No steel banding for increased safety
- Patented pin-in-wall anchor system holds strap loose until removed
- Easy loading and unloading

## The Challenge

Traditionally, securing cargo meant using load divider bulkheads, which can be heavy and potentially dangerous. Even more, bulkheads can cause damage when securing items such as steel coils. The large size and weight allows for less payload. This traditional means for securing cargo leads to an increase in cost and risk of injury.

## The Solution

Our patented and AAR-approved packaged product restraint system uses web strapping, a ratchet device, floor anchors and unique hooks to easily and quickly secure lading in place. This system replaces load divider bulkheads for a safer, more cost-effective solution to securing cargo. The lightweight system weighs less than half of one bulkhead, allowing for more payload, while the easy-to-use design means faster loading and unloading. We can design strap and anchor systems to meet a verity of cargo needs.

## Specifications

Length suited to customer needs  
Web strapping with metal ratchet
