

THE CHALLENGE

Automobile manufacturers continue to reduce the amount of ground clearance on their vehicles creating a need for a lower profile chock. Not only does the design of a new chock need to fit this profile, it needs to be durable to withstand heavy use while keeping the automobiles secured.

THE SOLUTION

Our low profile tri-level chock is the answer to the industry's reduced clearance needs. Our tri-level chock has a familiar design that nearly eliminates the learning curve when it comes to application. It will fit all tri-level auto racks currently in the field.

FEATURES & BENEFITS

- AAR-approved
- Low profile design
- Lightweight
- Protective coating
- Durable steel body
- Easy to install and remove
- Universal chock body
- Familiar design
- New black powder coated with protective rubber tip
