Announcing Holland’s New Grate Lock Track
Advanced Vehicle Restraint System Targets Auto Protection

CRETE, IL – September 12, 2014 – Holland’s Grate Lock Track (GLT) is a new key component to our vehicle restraint product offerings. This addition enables Holland to offer a Complete Vehicle Restraint System that includes the GLT, VRS Grate Chock and Door Edge Protection (DEP). The superior construction and galvanizing of the GLT ensures excellent durability in the demanding auto rack environment. On August 18, 2014 the SEFCC gave Holland Conditional Approval for 1000 carsets. The VRS Grate Chock works seamlessly with the GLT eliminating jumped chocks while the DEP protects the vehicles’ exterior from rail car damage. This complete system offers customers a one-stop-shop for auto rack components.

Holland is an engineering-based company servicing the railroad and related industries, delivering innovative transportation solutions that address the comprehensive and progressive needs of their clients. Headquartered in Crete, Illinois, Holland is the recognized leader in flash-butt welding in North America. Holland offers a variety of products and services such as welding, rail measurement and testing services, railcar components and railcar servicing solutions.
